

5P'S NOTEBOOK

P2: Prime Your Platform

*Ensure your technology is ready to support your team,
streamline service, and make every transaction smooth
and efficient.*

BACK-TO-SCHOOL RULES • 2 SHEETS

Why It Matters

The lunch line isn't the place for technology hiccups. If your point-of-service (POS) hardware fails, WiFi drops, or systems aren't synced, operations grind to a halt. Delays frustrate staff, shorten students' time to eat, and ultimately reduce participation. When your platform is tested and tuned before the first bell rings, your team can focus on serving meals—not troubleshooting tech.

Best Practices to Prime Your Platform

- ✓ **Test and Sync POS Hardware:** Ensure point-of-service devices are fully functional and connected to your inventory and menu systems.
- ✓ **Enable Faster Checkout:** Use tools like barcode scanners, ID cards, and touchless payment options to speed up service.
- ✓ **Strengthen WiFi and Tech Support:** Confirm your wireless infrastructure is strong in serving areas and ensure your staff knows how to access timely tech support.
- ✓ **Enable Digital Payments for Families:** Make it easy for families to fund accounts and stay current with a digital, real-time payment platform.

How the LINQ School Nutrition Suite Helps

Test and Sync POS Hardware

LINQ's POS is hardware-agnostic and cloud-based, meaning it runs on your existing devices and stays synced with menu planning, production records, and inventory in real time. Setup is simple, and offline mode ensures uninterrupted service even during connectivity issues.

Enable Faster Checkout

LINQ POS supports badge scanning, ID lookups, and quick-service functionality to move students through the line faster. With instant sync to student accounts, transactions are quick, accurate, and visible to families immediately.

Strengthen WiFi and Tech Support

LINQ is built for reliability, but we also back you up with responsive support. Our implementation team works with your district to identify coverage gaps and make sure every cafeteria is tech-ready from day one.

Enable Digital Payments for Families

LINQ Connect gives families one place to manage meal payments, view menus, submit meal applications, and set up automatic low-balance alerts. Funds are instantly applied to student accounts, reducing meal debt and eliminating line delays caused by account issues.

Start the year strong. With LINQ, your platform is your partner.

Because when your systems work seamlessly, your staff can focus on what matters: feeding students fast and well.
